

Min June Kim

Undergraduate Student

Hongik University

Seoul 04066, Republic of Korea

rnrmf1121@gmail.com

+82) 010-5966-7200

EDUCATION

Mar. 2019 ~
Present

Hongik University
Department of Computer Engineering

Bachelor of Science in Computer Engineering
GPA: 3.85 / 4.5

Expected Graduation Date: February 2026

RESEARCH EXPERIENCE

Pervasive Elastic Multimedia(PEM) Laboratory, Hongik University

Undergraduate Research Student

June. 2024 – July. 2025

- Reviewed and presented weekly seminar topics based on *Data Science from Scratch* and *Hands-On Machine Learning*, focusing on fundamentals of Machine Learning and Deep Learning concepts
- Reviewed and presented research papers on Video Anomaly Detection

Related Courses

- Database, Data Structures, Algorithms, Operating Systems
- Computer Architecture, Linear Algebra
- Fundamental Machine Learning, Advanced Machine Learning

PROJECTS

Dental Caries Detection from X-ray Images

Oct. 2024 – Dec. 2024

- Course project from “Fundamental Machine Learning”
- Collaborated with a licensed dentist on a dental X-ray image classification project
- Collected and annotated dental X-ray data (dentin cavity, pulpitis cavity) using Roboflow
- Implemented a multi-stage pipeline using YOLOv8s for caries region detection classification
- Implemented and compared ResNet18, EfficientNet, MobileNet, MLP, and a pretrained ResNet18, achieving slightly better classification accuracy compared to YOLOv8’s built-in classification head

Autonomous Drone Flight using Reinforcement Learning

Feb. 2025 – Present

- Graduation project for the Bachelor's degree in Computer Engineering
- Developing an indoor autonomous flight system using PPO-based reinforcement learning
- Trained policies in AirSim to reach a designated target while avoiding obstacles
- Used camera images and LiDAR readings as state inputs, and built fusion encoders with ResNet18 and PointNet
- Applied domain randomization and curriculum learning to improve generalization
- Real-world deployment via Raspberry Pi 5: sensor data is streamed to a laptop for remote inference and control commands are returned to the drone
- Currently assembling the drone and preparing for real-world deployment

SKILLS

Programming Languages	Python, C, C++
Frameworks & Libraries	PyTorch, ultralytics, stable-baselines3
Tools	Git, GitHub, Docker
Language	Korean(native), English(intermediate)

SCHOLARSHIPS

- Merit-based Scholarship, Spring 2024
- Merit-based Scholarship, Fall 2024
